

A BRIEFING FOR TRANSFORMATION LEADERS

The Diagnose Conversation

Most transformations don't fail on strategy. They stall in adoption. Here is how to see it early.

Strategy gets approved. Adoption is where transformations stall.

12%

of business transformations achieve their original ambitions. 88% fall short.

BAIN & COMPANY · 2024 · 400+ EXECUTIVES

#1

implementation barrier is resistance to change, ahead of budget, timelines and technology.

KEARNEY TRANSFORMATION STUDY · 2026 · 102 LEADERS

22%

of employees say they got enough training, coaching or tools to adapt after a reorganization.

BAIN & COMPANY · 2026 · ~1,000 EXECUTIVES AND EMPLOYEES

Three studies, one pattern: the plan survives approval, then stalls where people meet it.

THE BLIND SPOT

Dashboards report adoption. They cannot see the workarounds.

BAIN & COMPANY · JAN 2026 · ~1,000 EXECUTIVES AND EMPLOYEES WHO WENT THROUGH A REORGANIZATION

CURRENT VISIBILITY

Snapshot tools show that friction exists. They rarely show its kind, location or fix.

TODAY'S SNAPSHOT TOOLS

Surveys

Focus groups

Manager feedback

Readiness assessments

WHAT THEY SHOW

That friction exists

WHAT THEY MISS

What kind of friction it is

Knowledge, bandwidth, identity or loss

Where it concentrates

By unit, function, geography and role

Which intervention it needs

Training, provisioning, role design or acknowledgement

The gap is rarely commitment. It is resolution.

Most friction gets filed as a skills gap. The expensive costs are the other three.

USUALLY FILED HERE

Knowledge

"I don't know it yet, or nobody has decided."

Something new, unknown or undecided.

WHAT WORKS

Supply the answer: a decision, specific information, or training.

THE EXPENSIVE THREE

Bandwidth

"I can't reach it or fit it."

No time, tools or access. The environment blocks it.

WHAT WORKS

Provision and simplify: devices, access, time, fewer demands.

Identity

"Who am I here now?"

The change reads as a threat to standing, not a training gap.

WHAT WORKS

A concrete, respected role in the new model, built with peers.

Loss

"Nothing replaces it."

Something valued is ending. Arguing only confirms the loss.

WHAT WORKS

Acknowledge the loss and restore what it carried. Never argue with it.

Training fixes knowledge. The other three need changes to the environment, the role or the story.

Seeing where friction concentrates changes five decisions.

DECISIONS THIS COULD INFORM

Communication strategy

Which message lands where

Manager support

Which managers need help first

Rollout scope

What to simplify or sequence

Intervention timing

Where to step in early

Change resources

Where to put people and budget

The value is not another survey. It is seeing execution risk early enough to avoid the delay, the productivity loss and the failed adoption.

Diagnosis is one layer of three. The same conversations run the whole loop.

01

Diagnose

MAPPING AND DIAGNOSING

Maps readiness and friction by cohort, so every intervention is targeted, not broadcast.

02

Activate

CHANGE ACTIVATION

Weekly 1:1 AI conversations move each person from confusion to committed action.

03

Measure

EXECUTION INTELLIGENCE

A weekly signal on adoption, friction and emerging risk, while there is still time to act.

Diagnose gives leaders four views of where execution will stall.

ILLUSTRATIVE

Readiness Map

Readiness by cohort and component, so interventions land in the right place.

Risk and Reward Profiles

Friction and flow factors, ranked by likely impact on timelines.

Stakeholder Alignment

Where leadership narratives diverge before the front line feels it.

Change Readiness Profile

The share of each cohort ready today, and the constraint holding the rest.

SHOWN NEXT

One map for leadership: where we will lose execution velocity, why, and what to change.

In three cohorts, readiness is already there. Incentives are holding it back.

COHORT · RESPONDENTS

BINDING CONSTRAINT

Champion Ready Hesitant Resistant

Technology & Data n = 88

None

Marketing n = 62

None

Sales & Distribution n = 110

Support (mild)

Claims n = 141

Incentive

Underwriting n = 96

Incentive

Legal & Compliance n = 61

Incentive

Customer Service n = 127

Value (credibility)

Readiness is there.
48 to 57% of Claims, Underwriting and Legal already score Ready or Champion. Fix the incentive before adding training.

Shares, never names. Groups under 50 people are never reported, so Senior Leaders is not shown.

Real client readout, anonymized. Enterprise AI adoption program. n = 685 across the 7 cohorts shown. Champion = CCI score of 4 or higher. Bands use the five confidence components. Value and Incentive are scored separately. No cohort mean is reported: an average describes none of them.

Confidence sets readiness. Value amplifies it. Incentive decides whether anyone moves.

CHANGE CONFIDENCE INDEX · FIVE COMPONENTS

Gating rule: if the change is not worth it or does not pay, readiness is capped, whatever confidence says.

A short weekly conversation moves each person from ambiguity to agency.

WHAT MAKES IT STICK

- 10 to 15 minutes a week**
- Private and 1:1**
- Remembers context**
- A tone each person picks**

12 TO 24 WEEKS OF REINFORCEMENT

**Small shifts, reinforced weekly,
compound into new habits.**

Leaders get a weekly execution signal, not a quarterly snapshot.

WHERE THIS HAS WORKED

Clients used it to surface hidden risk, compress a program and launch AI products.

NEXT STEP

Start with one live transformation. Decide once you see the data.

HOW A DIAGNOSTIC WORKS

- 1 Pick one live transformation where slow adoption clearly costs the business.
- 2 We diagnose a meaningful population of employees, in their own words.
- 3 You see friction patterns, readiness by cohort and the decisions the data supports. Then you decide.

What you get: the Readiness Map, Risk and Reward Profiles, Stakeholder Alignment and the Change Readiness Profile.
