

A DISCOVERY CONVERSATION

The Diagnose Conversation

Where transformations stall, and how to see it early.

Where is the biggest risk in your transformation?

The strategy itself

**The technology and
process**

**Getting the
organization to work
differently**

Pick one. There is no wrong answer.

Strategy gets approved. Adoption is where transformations stall.

12%

of business transformations achieve their original ambitions. 88% fall short.

BAIN & COMPANY · 2024 · 400+ EXECUTIVES

#1

implementation barrier is resistance to change, ahead of budget, timelines and technology.

KEARNEY TRANSFORMATION STUDY · 2026 · 102 LEADERS

22%

of employees say they got enough training, coaching or tools to adapt after a reorganization.

BAIN & COMPANY · 2026 · ~1,000 EXECUTIVES AND EMPLOYEES

Three studies, one pattern: the plan survives approval, then stalls where people meet it.

THE BLIND SPOT

Dashboards report adoption. They cannot see the workarounds.

BAIN & COMPANY · JAN 2026 · ~1,000 EXECUTIVES AND EMPLOYEES WHO WENT THROUGH A REORGANIZATION

Snapshot tools show that friction exists. They rarely show its kind, location or fix.

TODAY'S SNAPSHOT TOOLS

Surveys

Focus groups

Manager feedback

Readiness assessments

ASK

On a scale of 1 to 10, how ready is the organization to diagnose what is helping or blocking adoption?

1

2

3

4

5

6

7

8

9

10

Not ready

Fully ready

Most friction gets filed as a skills gap. The expensive costs are the other three.

USUALLY FILED HERE

Knowledge

"I don't know it yet, or nobody has decided."

WHAT WORKS

Supply the answer: a decision, specific information, or training.

THE EXPENSIVE THREE

Bandwidth

"I can't reach it or fit it."

WHAT WORKS

Provision and simplify: devices, access, time, fewer demands.

Identity

"Who am I here now?"

WHAT WORKS

A concrete, respected role in the new model, built with peers.

Loss

"Nothing replaces it."

WHAT WORKS

Acknowledge the loss and restore what it carried. Never argue with it.

Of bandwidth, identity and loss, which is costing your transformation most right now?

ASK

If you could see exactly where friction concentrates, by unit, function, geography and role, what would you decide differently?

DECISIONS THIS COULD INFORM

**Communication
strategy**

Manager support

Rollout scope

**Intervention
timing**

**Change
resources**

The value is not another survey. It is seeing execution risk early enough to avoid the delay, the productivity loss and the failed adoption.

Diagnosis is one layer of three. The same conversations run the whole loop.

- 01 Diagnose**
MAPPING AND DIAGNOSING
Maps readiness and friction by cohort, so every intervention is targeted, not broadcast.
- 02 Activate**
CHANGE ACTIVATION
Weekly 1:1 AI conversations move each person from confusion to committed action.
- 03 Measure**
EXECUTION INTELLIGENCE
A weekly signal on adoption, friction and emerging risk, while there is still time to act.

Diagnose gives leaders four views of where execution will stall.

ILLUSTRATIVE

Readiness Map

Readiness by cohort and component, so interventions land in the right place.

Risk and Reward Profiles

Friction and flow factors, ranked by likely impact on timelines.

Stakeholder Alignment

Where leadership narratives diverge before the front line feels it.

Change Readiness Profile

The share of each cohort ready today, and the constraint holding the rest.

SHOWN NEXT

One map for leadership: where we will lose execution velocity, why, and what to change.

In three cohorts, readiness is already there. Incentives are holding it back.

COHORT · RESPONDENTS

BINDING CONSTRAINT

Champion Ready Hesitant Resistant

Technology & Data n = 88

None

Marketing n = 62

None

Sales & Distribution n = 110

Support (mild)

Claims n = 141

Incentive

Underwriting n = 96

Incentive

Legal & Compliance n = 61

Incentive

Customer Service n = 127

Value (credibility)

Readiness is there.
48 to 57% of Claims, Underwriting and Legal already score Ready or Champion. Fix the incentive before adding training.

Shares, never names. Groups under 50 people are never reported, so Senior Leaders is not shown.

Real client readout, anonymized. Enterprise AI adoption program. n = 685 across the 7 cohorts shown. Champion = CCI score of 4 or higher. Bands use the five confidence components. Value and Incentive are scored separately. No cohort mean is reported: an average describes none of them.

Confidence sets readiness. Value amplifies it. Incentive decides whether anyone moves.

CHANGE CONFIDENCE INDEX · FIVE COMPONENTS

Gating rule: if the change is not worth it or does not pay, readiness is capped, whatever confidence says.

A short weekly conversation moves each person from ambiguity to agency.

WHAT MAKES IT STICK

- 🕒 **10 to 15 minutes a week**
- 🔒 **Private and 1:1**
- 🗨️ **Remembers context**
- 📋 **A tone each person picks**

12 TO 24 WEEKS OF REINFORCEMENT

Small shifts, reinforced weekly, compound into new habits.

Leaders get a weekly execution signal, not a quarterly snapshot.

NEXT STEP

Start with one live transformation. Decide once you see the data.

What feels like a sensible next step?

OUR SUGGESTION

1

Pick one live transformation where slow adoption costs the business.

2

We diagnose a meaningful population, in their own words.

3

You see friction, readiness by cohort and the decisions it supports. Then you decide.

WHERE THIS HAS WORKED

Asahi Kasei Pharma M&A integration

2.7 / 5 perceived support, a risk leadership had not seen

Skanska Leadership transformation

3x faster 6-month leadership journey delivered in 2 months

Coach A AI transformation

3 AI products launched. Coach A also resells Pandatron.
